DigiFeeds

Data Aggregation Tool

DigiFeeds
Data Aggregation Tool

Framework

DigiFeeds is a data aggregation tool that captures, organizes, and correlates data feeds, providing analysts with additional information to augment their analyses. The Digifeeds framework is Cloud-ready across C2S, AWS, IC ITE, and DCOS. Digifeeds provides data preservation for short time-to-live (TTL) data feeds, data discovery using nearest neighbor algorithms, and data dissemination with multiple output formats and a common API to interface with external tools.

Features

• Warehouse Data for Trending Analysis

• Common Indexing and Search for Data Discovery

• Automatic Mapping, Video, and Branding for Data Visualization

• Multi-Format Product Generation and Download

• Notification Service with Customizable Criteria

• Data Mining Service API for Client Integration

Architecture

• Container-Based   • Scalable

• Service-Oriented   • Cloud-Ready

• Platform Agnostic

Integration With DigiFeeds
